

Five Must-Have

Hospital Pharmacy Supply Chain Capabilities

Multi-platform Visibility

Gain visibility of inventory across the entire system, including medications in transit or stored inside automation technologies such as carousels and dispensing cabinets.

Consolidated Demand Planning and Ordering

Establish a single point to all pharmacy supply chain transactions and databases to obtain a complete demand picture and enable greater process efficiencies for more accurate ordering.

Streamlined Procurement Process

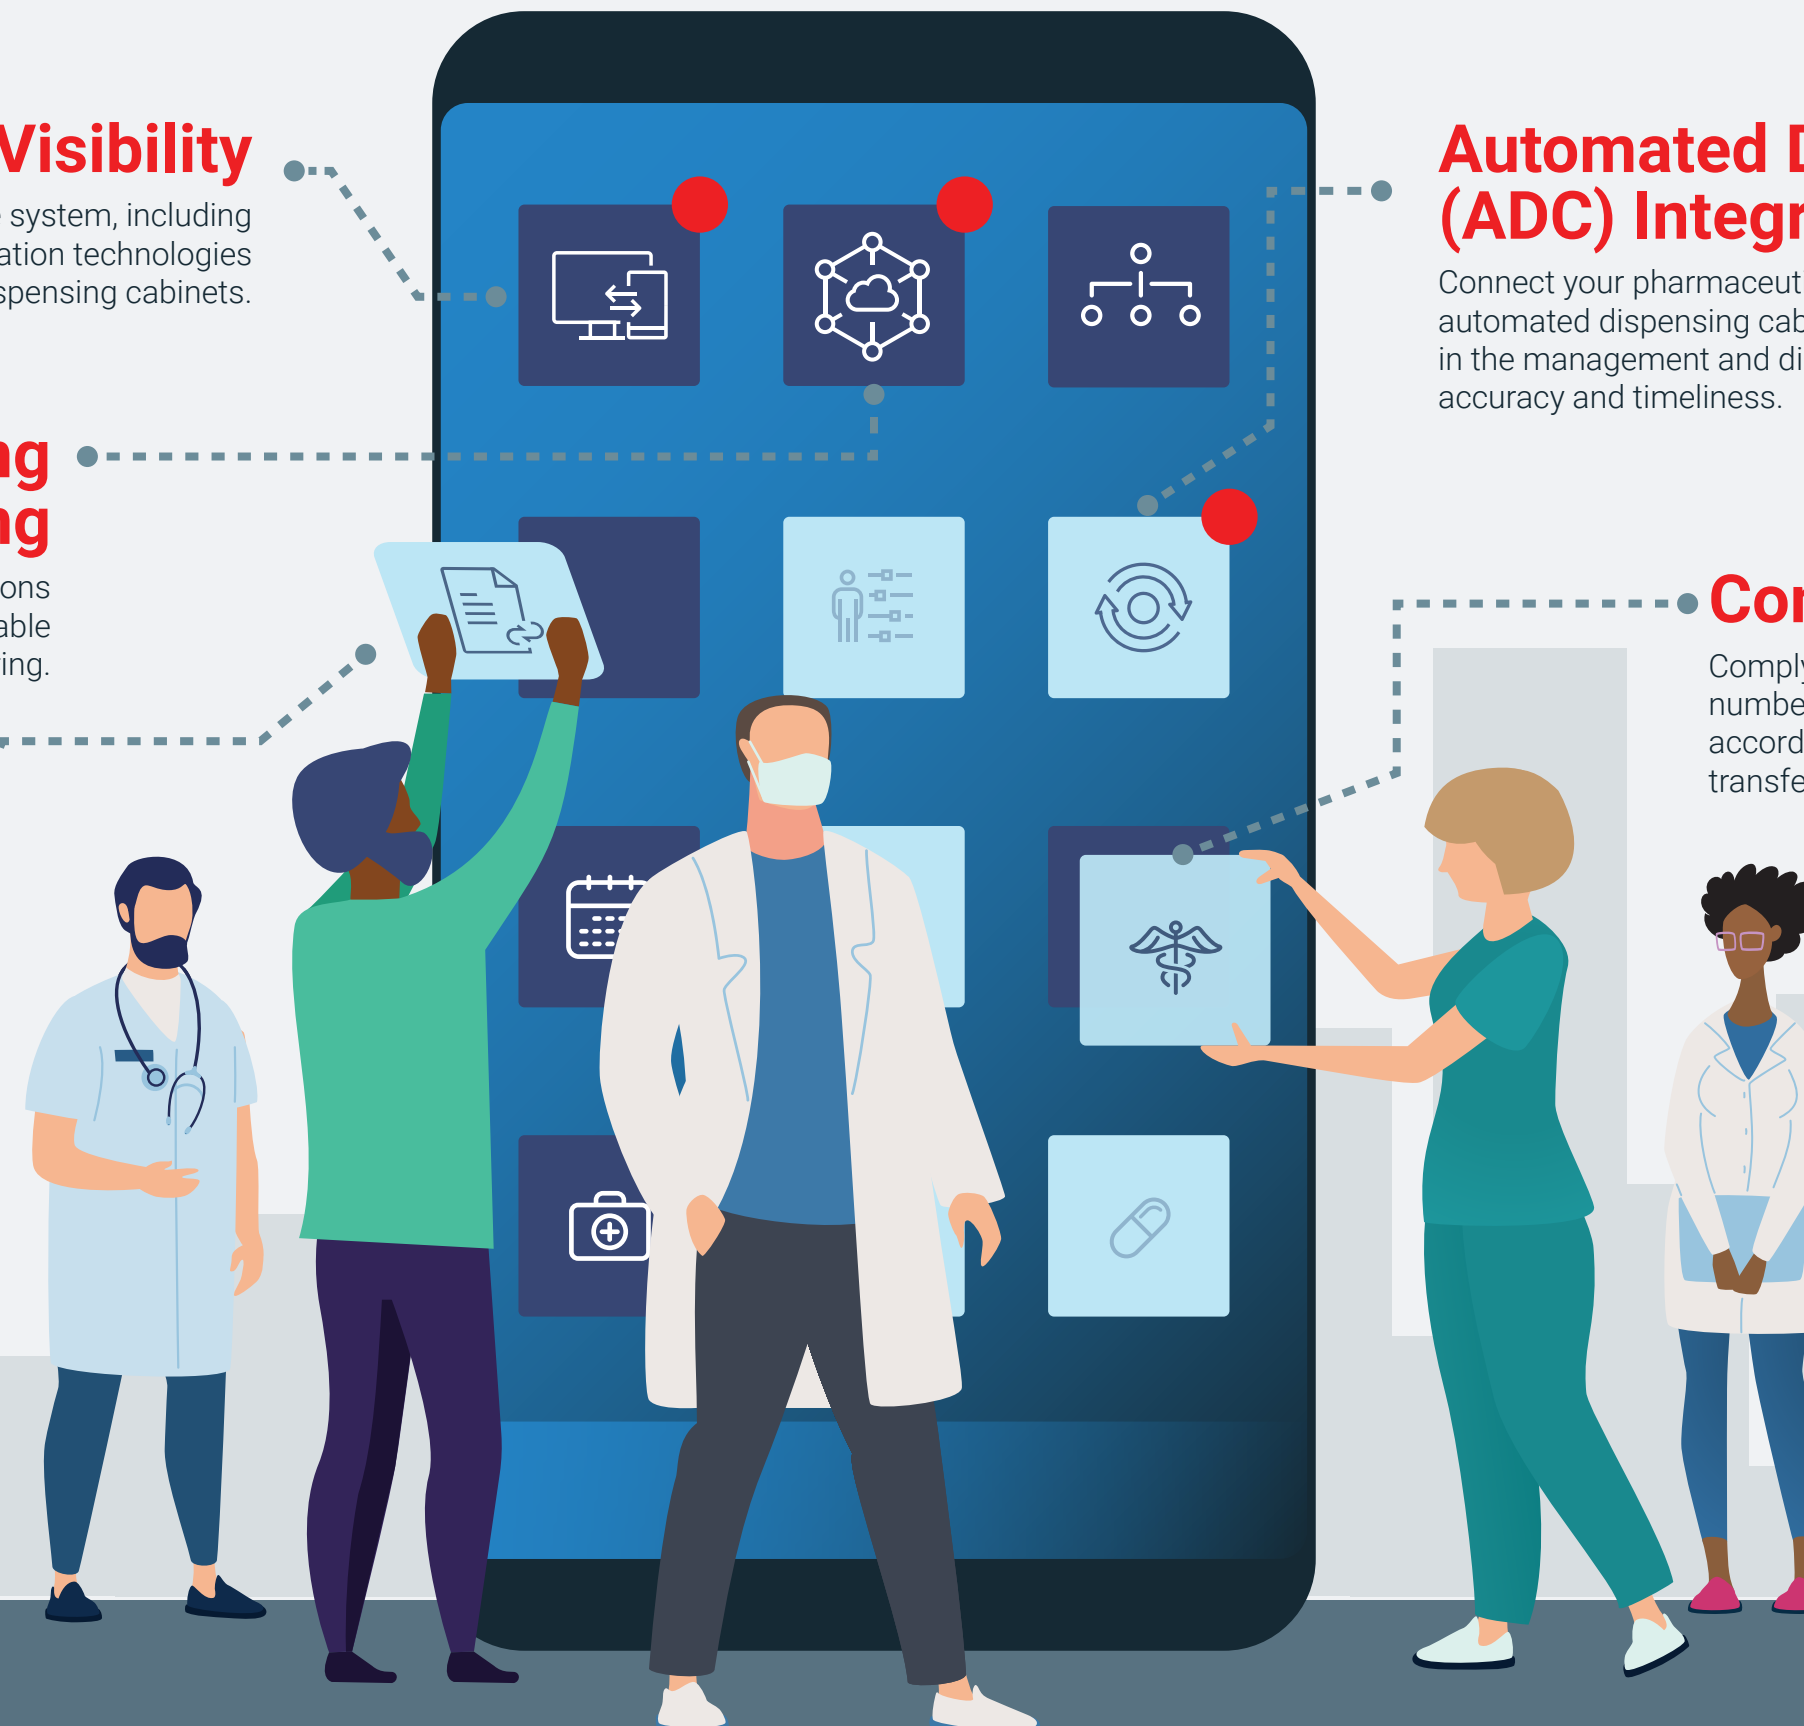

Manage and improve the complex pharmaceutical pricing and purchasing process by bringing the information into a single point of entry instead of bouncing from other systems for procurement.

Automated Dispensing Cabinets (ADC) Integration

Connect your pharmaceutical distribution management system into the automated dispensing cabinets to fully recover avoidable expenses sustained in the management and dispensation of medications, while preserving accuracy and timeliness.

Complete DSCSA Track and Trace

Comply with track and trace requirements by efficiently tracking lot number and expiration date as well as full product pedigree in accordance with DSCSA regulations including pharmaceutical sales and transfers to non-affiliated facilities.

Discover how Tecsys' pharmacy supply chain solutions can offer you these five capabilities and the opportunity to achieve new revenue and growth.
